QS-Cal: Gauge Management Software

QS-CAL Software is a simple database program that organizes calibration data for gauges and test equipment. Calibration Control can be used to manage a company's calibration system including internal as well as external periodic inspections.

This incredibly versatile 32-bit Client / Server system comes fully equipped with a wealth of powerful product features and support for the most popular database formats. With QS-CAL you would bring cutting edge technology to your factory floor!

The system is incredibly flexible and easy to use while still being completely secure. Client/server technology in QS-CAL enables manufacturers, calibration facilities, and industrial corporations to take advantage of an industry-leading database systems and enables clients to increase productivity and reduce manufacturing costs while adhering to stringent quality control guidelines.

Some of the features available in QS-CAL are:

- ⊗ **Digital Calibration Certificates** - Sai Online is committed to the paperless office of the future. QS-CAL is also compatible with MAPI email systems.
- ⊗ **Gauge and Part Recall** - QS-CAL allows you to easily recall gauges that might be affected by any discrepancy in your master. *Also, tracks parts that are measured by each gauge for full QS-9000 compliance.*
- ⊗ **Client/Server database** - a robust SQL database capable of supporting the needs of a multi-user environment. QS-CAL also provides a single user, local workstation version for organizations not needing multi-user connectivity.
- ⊗ **3rd Party Certificate Scanning** - Scan all of your paper certificates received from outside sources into QS-CAL.
- ⊗ **"Smart" Searching**
Intuitive searching. Choices narrow as more search characters are input. Finding from a targeted list prevents typographical errors. There are seven types of search facility provide viz. serial no., gauge id, description, gauge type, location, manufacturer and model number.

- ⊗ **Gauge Finder**
Use Gauge Finder to search for gauge for selected company.
- ⊗ **Custom Fields**
Add up to 3 user-defined fields to fit your company's needs. Define up to 10 gauge status indicators for each company. Besides using the categories of active or inactive, create your own classifications of gauge, such as broken or on order. Once defined, you can easily include or exclude these types of gauges on any report.
- ⊗ **Gauge Cloning**
Quickly enter gauge information by copying features of a similar gauge. Create new gauges from the set of existing gauge.
- ⊗ **Gauge Bookmarks**
Quickly access frequently used gauge with bookmarks.
- ⊗ **Event Based Tracking System**
QS-CAL uses up to 17 Event Wizards to track gauge. Events for: Calibration, Check-Out, Check-In, Check-Out & Check-In from Repair, Check-Out & Check-In from Calibration and 10 User-Defined Events.
- ⊗ **On Line Help**
Comprehensive Help is available on-screen, just in case you need assistance.
- ⊗ **Powerful Calibration Entry**
The calibration system built into QS-CAL is extremely flexible and comprehensive. All calibration data is recorded and the current status of the calibration is continuously updated. Five calibration results are possible: Passed, Failed, Adjusted, and Limited Use.
- ⊗ **Multiple Company Support**
Separate gauge data by company. Drop-down selection lists are specific to companies, so the system displays only valid choices for the company selected.
- ⊗ **Gauge History**
- ⊗ **Automatic Gauge & Part Numbering System**
- ⊗ **Tracks Vendor Performance**
- ⊗ **Unlimited Amount of Calibration Test Points**
- ⊗ **Calibration Certificates Report**
- ⊗ **Built- In Word Processor For Creating Procedures**
- ⊗ **Calibration Procedure Revision Control**
- ⊗ **Automatically reminders for gauges due for liberation**
